

Dear recruiter,

My career began in 1994 studying Administration, my interest in Computer Science led me to study Computer Systems Management & Networks and in 2014, I traveled to the United Kingdom where I lived for three years.

After returning to Spain, I prepared an English certification and in February 2018 I obtained a C1 grade, also during that year, a Web Application Development course and Full Stack JavaScript Developer Bootcamp, obtaining the same certificate in January 2019.

Currently, my experience with JavaScript / TypeScript would be about 4,5 years and with React 2,5 years, I have also continued training through online platforms such as Udemy.

Specifically, I am currently looking for a **mentored career plan** in order to continue growing professionally. This point would be very important to me. In addition, it would be ideal but not exclusive, to work in a company that has its own product and that I find interesting.

As for the technological stack of my interest, it would be React + TypeScript + Hooks + practically everything about layout and styles; CSS, Sass, Less, AGILE methodologies, Jira and Trello, Git, Gitflow and Docker among others.

Regarding the work model, (not freelance), something remote or hybrid.

As for the laptop/workstation, it would be very important that it did not have privilege restrictions when it comes to being able to install the necessary software or at least an agile IT support team to be able to resolve incidents quickly.

As for HHRR, I would like to work with a non-saturated team that can also respond to queries with agility.

It would be important to know how the project is managed internally, what methodology is used, how the team would be composed, if they have an adequate and already prepared onboarding to enter the project.

Regarding the salary range, **we would be talking about a base 28k**, but it would depend on the position and other factors. It must be taken into account that up to 40k are currently being offered to profiles with experience and who have high English, which is my case.

In order to optimize time, I would prefer to be able to validate all this info before continuing in the process and I think it is important that it can be shared with the rest of those involved in the next steps in the selection process, before going ahead and making sure that we can do match. It would also help to see a technical test according to the position to be filled, to validate if we can fit in.

Down below you can see a link to my portfolio, CV and this same Letter of Introduction for your consideration: <https://portfolio-gballester.netlify.app/>

Kind regards,  
Gabriel Ballester
